Re: Freedom of Information Act (FOIA) Request No. 209887

Dear Mr. Smathers:

This is in response to your request, dated November 29, 2011, and clarified on December 27, 2011, under the Freedom of Information Act (FOIA), for all e-mail messages sent by all GSA employees that work at 7th & D Streets, SW, in Washington, DC, that include the terms "bathroom" and/or "toilet," as they relate to the "exploding toilet" event that took place on or around September 26, 2011. We agreed to search for messages sent on the day of the event and the day after the event.

Enclosed are documents that are responsive to your request. However, we are withholding 90 documents pursuant to the sixth statutory exemption under FOIA which permits an agency to withhold "personnel and medical files and similar files," the disclosure of which "would constitute a clearly unwarranted invasion of personal privacy" (5 U.S.C. 552(B)(6)). We have determined that the individual employees that wrote and/or received these messages have privacy interests that would be violated by the release of documents that are merely private conversations. In addition, these documents are being withheld as we have determined that disclosure will not contribute significantly to the public's understanding of the operations or activities of the Government. Further, these documents may also be viewed as non-responsive to your request, as they are merely private communications and are, therefore, not agency records.

This constitutes a partial denial under FOIA. You may appeal this decision to the General Services Administration no later than one hundred and twenty (120) days from receipt of this decision by writing to the following address:

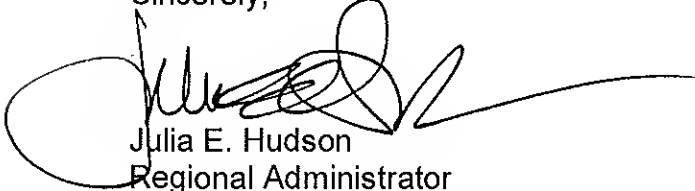

U.S. General Services Administration
301 7th Street, SW
Washington, DC 20407-0001
www.gsa.gov

Freedom of Information Act
Executive Secretariat Division (ADE)
General Services Administration
1800 F Street, NW, Room 3116
Washington, DC 20405-0001

Your appeal must be in writing and should summarize your rationale as to why the complete documentation should be released. Please enclose copies of your initial request and this denial. Both the appeal letter and the envelope should be marked prominently, "Freedom of Information Act Appeal."

This completes the action on your request. Should you have any questions, please do not hesitate to contact Ms. Toni Slappy, FOIA Coordinator, at (202) 205-0553.

Sincerely,

A handwritten signature in black ink, appearing to read "Julia E. Hudson", with a long horizontal flourish extending to the right.

Julia E. Hudson
Regional Administrator

Urgent Issue

Due to a mechanical failure there is high air pressure in the domestic water system that had resulted in damage to toilets in ROB. The Engineering Staff is working to correct the issue and expect this issue to be resolved with the hour.

Please communicate to your staff to NOT use the restrooms and emphasize DO NOT flush the toilets or use any domestic water. There has been damage to flushed toilets that has resulted in injuries. We will announce when the issue is resolved.

Update #1

The cause of the high pressure has been corrected. The restrooms are still closed while the building engineers bleed the pressure from the system. The restrooms should be open in less than 30 minutes.

Subject: ***Urgent *** Bathrooms Closed at ROB

Urgent Issue

Due to a mechanical failure there is high air pressure in the domestic water system that had resulted in damage to toilets in ROB. The Engineering Staff is working to correct the issue and expect this issue to be resolved within the hour.

Please communicate to your staff to NOT use the restrooms and emphasize DO NOT flush the toilets or use any domestic water. There has been damage to flushed toilets that has resulted in injuries. We will announce when the issue is resolved.

Potomac SC is directing all media inquiries to Mike McGill

The plumbing is repaired and most restrooms are back in operation with one or two exceptions. We are assessing the cause and will have a report in the near future.

ROB Mechanical Incident 9/26/11

1 message

Chris Litsey (WPMFB) <chris.litsey@gsa.gov>

Mon, Sep 26, 2011 at 6:39 PM

To: Shauna Carter <shauna.carter@gsa.gov>

Shauna,

At approximately 12:20 PM on 9/26/11 I was notified that there was an emergency in the 4071 Restroom, and that someone had been injured. I responded with the Assistant Building Manager Jesse Hausmann. Upon arriving we found Nurse on site administering aid to the injured employee and several other employees assisting. It was apparent that the injury was caused by the fragment of a broken toilet bowl. The upper portion of the bowl where the water supply comes in (top portion against the wall) was broken, and the trap on the bottom was also broken. People on site told us that the toilet "exploded". We found at that time that the waterlines to toilets in that restroom were dry and flushing the toilets created a loud and startling sound, and also ejected the remaining water from the bowl. I immediately called the Work Leader Brian Shaffer to investigate the problem. About that time, I received another call from the ROB Service Desk that another toilet on the first floor had shattered and another person had been injured. I directed that all ROB Staff begin closing all bathrooms to prevent further injury, and Jesse Hausmann went to the ROB Security Control Center to make an announcement that all restrooms were closed. Brian Shaffer was able to investigate the domestic water tank and found the tank dry. An air compressor was running creating pressure in the domestic water tank and that may have contributed to this incident. This compressor was immediately turned off, pressure valves were opened to reduce the pressure in the tank, and the tank was allowed to fill with water. This was happening at about 12:30 PM, and an estimate of one hour to fill the tank and purge air from the system.

I informed my leadership team of the issue at about 12:30 making multiple calls, while going to my office to put out an email communication to the Senior Contacts in ROB. The initial overhead announcement went out at about 12:35 PM. I received feedback that the message was difficult to understand and a second announcement was made at about 12:40 PM. The email to Senior Contacts was sent at 12:45 PM. Event specific signs were printed and posted on the restrooms throughout the building. At about 12:55 PM, Brian Shaffer informed me that the domestic water tank was filled and building O&M staff were working to purge air from the system. All O&M staff were employed to complete this as quickly as possible.

I called Jimmy Huff from the Safety Office and we met at Rm 4071, the site of the original incident just after 1:00 PM. Mr. Huff collected information for his investigation/report. I also took pictures of the damage at that time. At about 1:15 PM it was verified that all bathrooms fixtures in the building had been purged, and were operating properly. I passed that information along to the Senior Contacts via email. However, at 1:49 PM there was another incident in Rm 1071 reported, where the trap on a toilet bowl shattered. This was communicated to leadership, and all bathrooms were again purged. Believing that air was trapped in the system all faucets were turned on and left on throughout the building for over an hour. The toilets were flushed throughout the building while turning on the faucets at about 2:00 PM, and again when turning them off at 3:15 PM. A watch was placed on the domestic water tank at about 3:30 PM, and remains in place currently. O&M staff was instructed to continue to flush toilets and run faucets to remove any potential air from the system until 6:00 PM. Staff will be evaluating toilets for damage while continuing to purge the system. Any toilets with damage will be taken out of the system. These actions will continue tomorrow morning. There were several instances of broken toilet bowls and damaged wax rings. A comprehensive list of damage will follow.

John,

I sent these emails to the Senior Contacts in ROB only. We also used multiple overhead announcements and posted notices on the bathroom doors to inform staff.

 [PrintE-mail](#) 

WASHINGTON (WUSA) -- A woman was sent to the hospital after a toilet exploded at the General Services Administration (GSA) Building in DC, building officials said.

DC Fire Spokesman Pete Piringer confirmed the woman was taken to the hospital with serious, non-life-threatening injuries.

The GSA Regional office building employees were sent a memo, warning them to not use the bathrooms in the building, because the plumbing may be dangerous. The building is on 7th and D SW.

"DO NOT flush toilets or use any domestic water. Due to a mechanical failure, there is high air pressure in the domestic water system that resulted in damage to toilets. The engineering staff is working to correct the issue," the memo said. "There has been damage to flushed toilets that has resulted in injuries. We will announce when the issue is resolved."

Re: Yesterday's Incident - Water Pressure

1 message

Chris Litsey (WPMFB) <chris.litsey@gsa.gov>
 To: "Jimmy Huff (WPMACB)" <jimmy.huff@gsa.gov>

Tue, Sep 27, 2011 at 8:44 AM

Jimmy,

This is something that I wrote last night, and this should help. I can also meet with you but maybe you will have more specific questions after reading this.

At approximately 12:20 PM on 9/26/11 I was notified that there was an emergency in the 4071 Restroom, and that someone had been injured. I responded with the Assistant Building Manager Jesse Hausmann. Upon arriving we found Nurse on site administering aid to the injured employee and several other employees assisting.

It was apparent that the injury was caused by the fragment of a broken toilet bowl. The upper portion of the bowl where the water supply comes in (top portion against the wall) was broken, and the trap on the bottom was also broken. People on site told us that the toilet "exploded". We found at that time that the waterlines to toilets in that restroom were dry and flushing the toilets created a loud and startling sound, and also ejected the remaining water from the bowl. I immediately called the Work Leader Brian Shaffer to investigate the problem. About that time, I received another call from the ROB Service Desk that another toilet on the first floor had shattered and another person had been injured. I directed that all ROB Staff begin closing all bathrooms to prevent further injury, and Jesse Hausmann went to the ROB Security Control Center to make an announcement that all restrooms were closed. Brian Shaffer was able to investigate the domestic water tank and found the tank dry.

An air compressor was running creating pressure in the domestic water tank and that may have contributed to this incident. This compressor was immediately turned off, pressure valves were opened to reduce the pressure in the tank, and the tank was allowed to fill with water. This was happening at about 12:30 PM, and an estimate of one hour to fill the tank and purge air from the system.

I informed my leadership team of the issue at about 12:30 making multiple calls, while going to my office to put out an email communication to the Senior Contacts in ROB. The initial overhead announcement went out at about 12:35 PM. I received feedback that the message was difficult to understand and a second announcement was made at about 12:40 PM. The email to Senior Contacts was sent at 12:45 PM.

Event specific signs were printed and posted on the restrooms throughout the building. At about 12:55 PM, Brian Shaffer informed me that the domestic water tank was filled and building O&M staff were working to purge air from the system. All O&M staff were employed to complete this as quickly as possible.

I called Jimmy Huff from the Safety Office and we met at Rm 4071, the site of the original incident just after 1:00 PM. Mr. Huff collected information for his investigation/report. I also took pictures of the damage at that time.

At about 1:15 PM it was verified that all bathrooms fixtures in the building had been purged, and were operating properly. I passed that information along to the Senior Contacts via email. However, at 1:49 PM there was another incident in Rm 1071 reported, where the trap on a toilet bowl shattered. This was communicated to leadership, and all bathrooms were again purged. Believing that air was trapped in the system all faucets were turned on and left on throughout the building for over an hour. The toilets were flushed throughout the building while turning on the faucets at about 2:00 PM, and again when turning them off at 3:15 PM. Chris,

A very good report. If possible, can I go with one of your people to take a look at the location of the air compressor. Also has there been any recent complaints regarding water pressure.. In the last 3 months?

Brian Shaffer was able to investigate the domestic water tank and found the tank dry. An air compressor was running creating pressure in the domestic water tank and that may have contributed to this incident. This compressor was immediately turned off, pressure valves were opened to reduce the pressure in the tank, and the tank was allowed to fill with water. This was happening at about 12:30 PM, and an estimate of one hour to fill the tank and purge air from the system.

I informed my leadership team of the issue at about 12:30 making multiple calls, while going to my office to put out an email communication to the Senior Contacts in ROB. The initial overhead announcement went out at about 12:35 PM. I received feedback that the message was difficult to understand and a second announcement was made at about 12:40 PM. The email to Senior Contacts was sent at 12:45 PM. Event specific signs were printed and posted on the restrooms throughout the building. At about 12:55 PM, Brian Shaffer informed me that the domestic water tank was filled and building O&M staff were working to purge air from the system. All O&M staff were employed to complete this as quickly as possible.

I called Jimmy Huff from the Safety Office and we met at Rm 4071, the site of the original incident just after 1:00 PM. Mr. Huff collected information for his investigation/report. I also took pictures of the damage at that time. At about 1:15 PM it was verified that all bathrooms fixtures in the building had been purged, and were operating properly. I passed that information along to the Senior Contacts via email. However, at 1:49 PM there was another incident in Rm 1071 reported, where the trap on a toilet bowl shattered. This was communicated to leadership, and all bathrooms were again purged. Believing that air was trapped in the system all faucets were turned on and left on throughout the building for over an hour. The toilets were flushed throughout the building while turning on the faucets at about 2:00 PM, and again when turning them off at 3:15

11/29/11

GSA.gov Mail - Re: Yesterday's Incident - Water Pressure

PM. A watch was placed on the domestic water tank at about 3:30 PM, and remains in place currently. O&M staff was instructed to continue to flush toilets and run faucets to remove any potential air from the system until 6:00 PM. Staff will be evaluating toilets for damage while continuing to purge the system. Any toilets with damage will be taken out of the system. These actions will continue tomorrow morning. There were several instances of broken toilet bowls and damaged wax rings. A comprehensive list of damage will follow.

<http://wusa9.com/news/article/168701/158/Exploding-Toilet-Sends-Woman-To-Hospital>

WASHINGTON (WUSA) -- A woman was sent to the hospital after a toilet exploded at the General Services Administration (GSA) Building in DC, building officials said.

DC Fire Spokesman Pete Piringer confirmed the woman was taken the the hospital with serious, non-life-threatening injuries.

The GSA Regional office building employees were sent a memo, warning them to not use the bathrooms in the building, because the plumbing may be dangerous. The building is on 7th and D SW.

"DO NOT flush toilets or use any domestic water. Due to a mechanical failure, there is high air pressure in the domestic water system that resulted in damage to toilets. The engineering staff is working to correct the issue," the memo said. "There has been damage to flushed toilets that has resulted in injuries. We will announce when the issue is resolved."

Jimmy,

It is my understanding that this has never been an issue before. I believe that someone manually turned on the air compressor in question, and left it unattended. I am not sure why they would turn that compressor on, but perhaps to lower the water level in the holding tank more quickly. The pressure on that compressor was set at 60 psi, which was high enough to push the water out of the tank and keep the water pumps from coming on. The pressure was enough to damage the toilets. I will have someone meet you and show you the compressor.

Chris

 Jimmy,

This is something that I wrote last night, and this should help. I can also meet with you but maybe you will have more specific questions after reading this.

At approximately 12:20 PM on 9/26/11 I was notified that there was an emergency in the 4071 Restroom, and that someone had been injured. I responded with the Assistant Building Manager Jesse Hausmann.

Upon arriving we found Nurse on site administering aid to the injured employee and several other employees assisting. It was apparent that the injury was caused by the fragment of a broken toilet bowl.

The upper portion of the bowl where the water supply comes in (top portion against the wall) was broken, and the trap on the bottom was also broken. People on site told us that the toilet "exploded". We found at that time that the waterlines to toilets in that restroom were dry and flushing the toilets created a loud and startling sound, and also ejected the remaining water from the bowl. I immediately called the Work Leader Brian Shaffer to investigate the problem. About that time, I received another call from the ROB Service Desk that another toilet on the first floor had shattered and another person had been injured. I directed that all ROB Staff begin closing all bathrooms to prevent further injury, and Jesse Hausmann went to the ROB Security Control Center to make an announcement that all restrooms were closed. Brian Shaffer was able to investigate the domestic water tank and found the tank dry. An air compressor was running creating pressure in the domestic water tank and that may have contributed to this incident. This compressor was immediately turned off, pressure valves were opened to reduce the pressure in the tank, and the tank was allowed to fill with water. For your review.

On September 26, 2011 the GSA Regional Office Building experienced a domestic water system incident. The effected ROB domestic water system dates to the 1950s, including the holding tank and plumbing that was over pressurized. The toilet fixtures that fractured were older porcelain bowls (likely with existing micro fractures) that were piped directly to the domestic water system.

Over the years, numerous changes and modifications to the domestic water system resulted in redundant systems that were wired incorrectly. This contributed to the existing safety systems not functioning properly. Additionally, an air compressor connected to the domestic water holding tank was inadvertently left in operation. Higher than normal air pressure forced air into the building plumbing systems and the water out of the roof-top holding tank. The overpressure of the plumbing system caused toilet fixtures to fracture when flushed.

The combination of an older system, incorrectly wired controls, human error, direct plumbing and old porcelain fixtures all contribute to this incident.

Update to include mitigation.

On September 26, 2011 the GSA Regional Office Building experienced a domestic water system incident. The affected ROB domestic water system dates to the 1950s, including the holding tank and plumbing that was over pressurized. The toilet fixtures that fractured were older porcelain bowls (likely with existing micro fractures) that were piped directly to the domestic water system.

Over the years, numerous changes and modifications resulted in redundant systems that were wired incorrectly. This contributed to the existing safety systems not functioning properly. Additionally, an air compressor connected to the domestic water holding tank was inadvertently left in operation. The increased pressure in the system forced air into the building plumbing systems and the water out of the roof-top holding tank. The safety systems did not correct the problem, and as a result the overpressure of the plumbing system caused toilet fixtures to fracture when flushed.

The combination of an old system with incorrectly wired controls, human error, direct plumbing and older porcelain fixtures all contribute to this incident. The manually operated compressor that was inadvertently left on has been removed from service. The holding tank water levels are being monitored by maintenance staff, and a project to correct the control system shortcomings is being developed.
